

YR4 Mathematics Hints & Tips

- ❖ Helping pupils revise their **times tables** is vitally important to supporting many areas of the 11+ maths curriculum. A fantastic app below suggests being used 10 minutes a day (*only accessible on Android devices*).

- ❖ Throughout this block of lessons we have focused on the **numeracy vocabulary** associated with the four operations (+, -, x, ÷). Supporting pupils with revising these keywords is vital e.g. **product** (a maths glossary can be found on the Teachitright student portal).
- ❖ **Reviewing** previous Teachitright maths **homework exercises** can help pupils identify misconceptions and learn from those mistakes. This is regularly carried out in the sessions.
- ❖ It is useful to use **everyday scenarios** to help your child develop their mathematical knowledge e.g. counting out change received or practising calculations in the car.
- ❖ Another crucial area to performing well in the numeracy section of the 11+ is having an awareness of special numbers e.g. prime, cubed and squared. A brilliant board game to aid this understanding is trilemma and this is a resource used at Teachitright.
